

Environmental impact on reproduction and fertility

JSPS SAC-seminar/ /post graduate course
Linköping University (LiU)
Lecture Hall “Eken” Entrance 65, US campus
August 22-23 2018

This two-day JSPS SAC Seminar/post graduate course (Faculty of medicine, LiU, Code 8FO0104, 1.5 ECTS), intends to gather researchers working in different aspects of the effect of the environment on our capability to maintain gamete quality and fertility, using a comparative approach. The programme covers the effects of environmental cues, pollutants, endocrine disruptors and nanomaterials on reproductive capabilities of animal models and human. It bridges basic research to epidemiological, animal and human cohort studies. The goal is to provide a broad spectrum of research and current knowledge on the effects of our environment; aquatic or terrestrial, out in the field or within our house or working office, on the capabilities to reproduce.

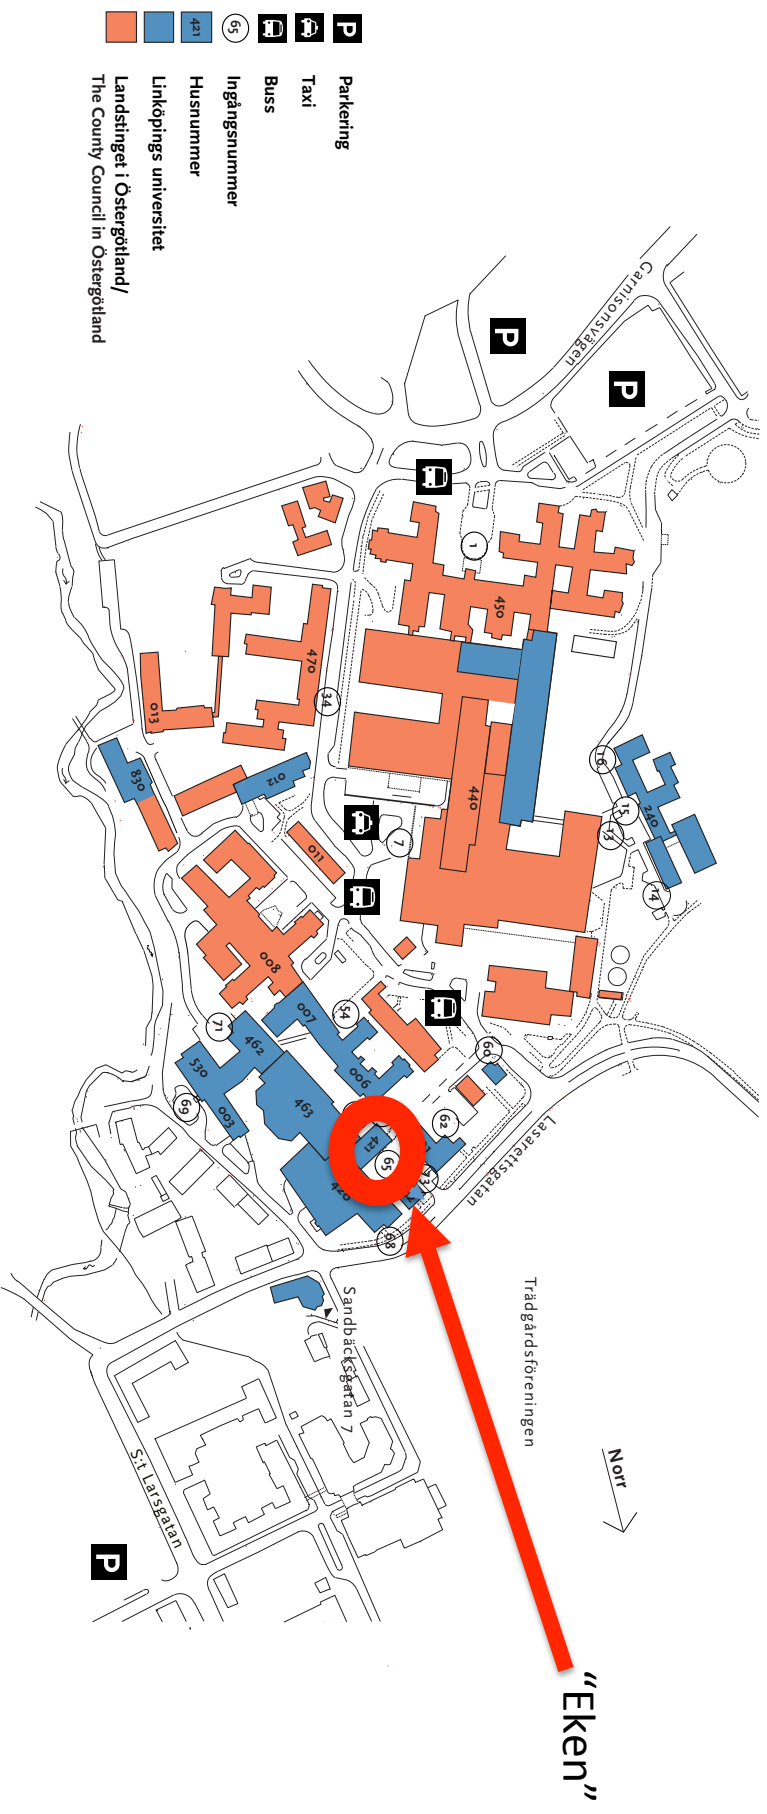

The course seminar targets graduate students, junior researchers and clinicians stimulating future research projects and the improvement of research and monitoring of environmental effects on reproduction.

The JSPS Seminar/post graduate course is free of charge.

*For inquires and sign up for participation before **29 July 2018** by sending an e-mail to: manuel.alvarez-rodriquez@liu.se*

Specially invited speaker:

Professor Teruhiko Wakayama, Advanced Biotechnology Center,
Yamanashi University, Japan: “Freeze-dried sperm preserved on space station”.
